

ST 705; Spring 2020

Linear Models and Variance Components

Lecture: Mondays/Wednesdays, 11:45–13:00, 2229 SAS Hall

Lab: Mondays, 16:30–17:20, 1108 SAS Hall

Instructor: Dr. Jonathan P Williams

Email: jwilli27@ncsu.edu

Course website: <https://jonathanpw.github.io/ST705>

Office location: 5218 SAS Hall

Office hours: 13:00–14:30 Mondays and Tuesdays

Office phone: 919.513.0191

Teaching Assistant: Han Wang

Email: hwang77@ncsu.edu

Office hours location: 1101 SAS Hall

Office hours: 10:00–11:00 Thursdays

Course Description: Theory of estimation and testing in full and non-full rank linear models. Normal theory distributional properties. Least squares principle and the Gauss-Markoff theorem. Estimability and properties of best linear unbiased estimators. General linear hypothesis. Application of dummy variable methods to elementary classification models for balanced and unbalanced data. Analysis of covariance. Variance components estimation for balanced data.

Corequisite: ST 702.

Credit Hours: 3

Text(s): *A primer on linear models*

Author(s): John F Monahan

Grade Distribution:

| | |
|--------------|-----|
| Assignments | 30% |
| Midterm exam | 30% |
| Final exam | 40% |

Letter Grade Distribution:

| | | | |
|---------------|----|---------------|----|
| ≥ 93.00 | A | 73.00 - 76.99 | C |
| 90.00 - 92.99 | A- | 70.00 - 72.99 | C- |
| 87.00 - 89.99 | B+ | 67.00 - 69.99 | D+ |
| 83.00 - 86.99 | B | 63.00 - 66.99 | D |
| 80.00 - 82.99 | B- | 60.00 - 62.99 | D- |
| 77.00 - 79.99 | C+ | ≤ 59.99 | F |

Midterm exam period: 11:45–13:00 on Monday, March 2, 2020 at 2229 SAS Hall.

Final exam period: 08:00–11:00 on Monday, May 4, 2020 at 2229 SAS Hall.

Personal note to students: Please do not feel intimidated about interacting with the me. Regardless of how busy or stressed I may appear to you, teaching your class is a part of my job, and I take that very seriously. I care deeply about the quality of your learning. Please always reach out to me if you have questions, concerns, or need help. I understand that it can be difficult and can even feel embarrassing to ask for help. However, I was once in your position, and I promise to always treat you with respect, empathy, and kindness. Nobody that ever did anything meaningful did so without first failing over and over again.

Course policies and commentary:

- **Assignments**

- See instructions at https://jonathanpw.github.io/ST705/grading_instructions.txt.
- Homework will be assigned each Monday, and will be due the following Monday **at the start of class**. Revisions to assignment due dates will be posted on the course website.
- Each homework assignment will receive the same weight in the calculation of the final course grade (i.e., longer (shorter) assignments do not count for a larger (smaller) portion of the overall assignment course grade). For each assignment, each exercise will receive 2 points of credit if the solution is correct, 1 point of credit if the solution is mostly correct, and 0 points of credit otherwise.
- No late assignments will be accepted. Reach out to the instructor if you begin to fall behind!
- It is strongly encouraged for you to work with classmates on all homework assignments. You will learn a lot about what you do and do not understand when you discuss your ideas and solutions with others, and you will expand the way you think when you understand the ideas and solutions of others.
- If you are not confident that you have correctly solved all homework problems before submitting each assignment, then you are not making adequate use of available resources (i.e., discussions with classmates, lectures notes, textbook, open-source materials available online, office hours).
- Take responsibility for understanding solutions to all assignments. For example, if you find a solution on StackExchange, then convince yourself that the solution is actually correct.
- **Learn to distinguish between the things you *do* know and the things you *do not* know** (this is one of the most important results of all education). To understand, to *a* particular degree, that a given statement is true means that you can explain why the statement is true, to *the* particular degree.

- **Exams**

- All exams are closed-book and closed-notes. Any communication with other students is strictly prohibited during exams.
- A study guide will be provided by the instructor prior to each exam.

- **Attendance**

- Use lecture time (or not) as you feel most productive, but do not use it in a way which is distracting to others.
- Lecture time is not for answering homework questions; please attend the lab or office hours for homework questions.

Tentative Course Outline:

Basic linear algebra: Vector spaces, Null space, and Column space, Idempotent matrix, the Projection matrix, Matrix decompositions (QR, Cholesky, eigenvalues and eigenvectors, SVD) (2 lectures)

Solving a system of linear equations: the existence of solutions, generalized inverse (2 lectures)

General linear models: different classes of linear models and related assumptions (1 lecture)

Least squares method: normal equations and their general solutions (2 lectures)

Reparameterization (1 lectures)

Identifiability and Estimability: linearly estimable functions of model parameters, least squares estimators of estimable functions (3 lectures)

The Gauss-Markov model: best linear unbiased estimators, the Gauss-Markov theorem, variance estimation, model misspecification, underfitting and overfitting (3 lectures)

The Aitken model: generalized least squares, estimability, Aitken's theorem (2 lectures)

Imposing constraints: estimation of model parameters with additional constraints, restricted normal equations and their solution, best estimation in a constrained model (2 lectures)

Distributional theory: Multivariate normal, Chi-squared, F and t distributions, distribution of quadratic forms, Cochran's theorem, maximum likelihood estimation in Gaussian linear models (2 lectures)

Hypothesis testing: General linear hypotheses, Testable hypotheses, General linear test, Likelihood ratio test (2 lectures)

Confidence intervals and multiple comparisons: confidence region, simultaneous confidence intervals (Bonferroni method, Scheffe's method, Tukey's method), Multiple testing (2 lectures)

Linear mixed effects model: definition of general mixed effects models, maximum likelihood and restricted maximum likelihood estimation, analysis of variance in mixed effects models, best linear unbiased prediction (3 lectures)

NCSU Policies, Regulations, and Rules (PRR): Students are responsible for reviewing the NC State University PRR's which pertain to their course rights and responsibilities:

- Equal Opportunity and Non-Discrimination Policy Statement <https://policies.ncsu.edu/policy/pol-04-25-05> with additional references at <https://oied.ncsu.edu/equity/policies/>
- Code of Student Conduct <https://policies.ncsu.edu/policy/pol-11-35-01>
- Grades and Grade Point Average <https://policies.ncsu.edu/regulation/reg-02-50-03>
- Credit-Only Courses <https://policies.ncsu.edu/regulation/reg-02-20-15>
- Audits <https://policies.ncsu.edu/regulation/reg-02-20-04>

Policy on Academic Integrity: The Code of Student Conduct defines a university policy on academic integrity: <https://policies.ncsu.edu/policy/pol-11-35-01>. Your signature on work submitted for grading implies compliance with this policy. Cheating, plagiarism and other forms of academic dishonesty will not be tolerated. Violation of the Code of Student Conduct will be reported and severe penalties will be enforced.

Disability Services for Students: Reasonable accommodations will be made for students with verifiable disabilities. In order to take advantage of available accommodations, students must register with the Disability Resource Office at Holmes Hall, Suite 304, 2751 Cates Avenue, Campus Box 7509, 919-515-7653. For more information on NC State's policy on working with students with disabilities, please see the Academic Accommodations for Students with Disabilities Regulation (REG02.20.01)
